No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DB seq length: 0

                                                                                           The invention relates to a novel human apoptosis-associated factor (AAB60386, AAB60387), designated NTZRM1000558, which contains a death effector domain (DED) and a caspase family cleavage domain and is capable of inducing apoptosis in cells. The invention also relates to nucleic acids encoding the protein (AAF27407, AAF27408); variants of the protein (particularly dominant negative variants); vectors and host cells comprising a nucleic acid which encodes an apoptosis-associated factor of the invention; the recombinant production of the protein; an antibody against the protein; and methods of screening for compounds which can regulate apoptosis. The apoptosis-related factor is useful in regulating diseases associated with cell proliferation and in screening drug candidates e.g., for regulating cell proliferation or cell death in ischaemic diseases and chronic viral diseases. The present sequence represents cDNA encoding a substantial proportion of the human apoptosis-

                                                                                                                                                                                                                                                                                    В
                                                                                                                                                                                                                                                                                                                5
                                                                                                                                                                                                                                                                                                                                                         문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel human apoptosis-associated factor CC (AABS0386, AAB60387), designated NTZRM100558, which contains a death CC effector domain (DED) and a caspase family cleavage domain and is capable CC of inducing apoptosis in cells. The invention also relates to nucleic caids encoding the protein (AAF27407, AAF27408); variants of the protein CC (particularly dominant negative variants); vectors and host cells CC comprising a nucleic acid which encodes an apoptosis- associated factor of the invention; the recombinant production of the protein; an antibody CC against the protein; and methods of screening for compounds which can CC regulate apoptosis. The apoptosis related factor is useful in regulating CC diseases associated with cell proliferation and in screening drug c candidates e.g., for regulating cell proliferation or cell death in cischaemic diseases and chronic varial diseases. The present sequence cc represents a full-length cDNA encoding the human apoptosis-associated cc factor NT2RM1000558
                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

The invention provides human apoptosis regulator (APRG) polypeptides and polynucleotides. The APRG polypeptides, polynucleotides and modulators are useful for diagnosis, treatment and prevention of cell proliferative, immunological and reproductive disorders. The cell proliferative disorders include cancers, actinic keratosis, arteriosclerosis, atherosclerosis, bursitis, cirrhosis, hepatitis, psoriasis, and immunological disorders include acquired immunodeficiency syndrome

CC ankylosing spondylitis, amyloidosis, allergies, anemia, osteoporosis,
CC autoimmune hemolytic anemia, asthma, autoimmune thyroiditis, Crohn's
CC disease, contact dermatitis, diabetes mellitus, gout, Graves' disease,
CC glomerulonephritis, rheumatoid arthritis, scleroderma, systemic lupus
CC erythematosus, systemic sclerosis, ulcerative colitis, haemodialysis,
CC uveitis, viral, bacterial, fungal, parasitic, protozoal, helminthic
CC infections and trauma. Reproductive disorders include disorders of
CC prolactin production, infertility, endometriosis, polycystic ovary
CC syndrome, ectopic pregnancies, galactorrhea, abnormal sperm physiology,
CC disruptions of spermatogenesis, cancer of testis and prostate, impotence,
CC disruptions of spermatogenesis, cancer of testis and prostate, impotence,
CC carcinoma of male breast and gynecomastia. The APRG polynucleotides are
CC carcinoma of male breast and gynecomastia. The APRG polynucleotides are
CC carcinoma of male breast and gynecomastia. The APRG polynucleotides are
CC carcinoma of male breast and gynecomastia. The APRG are expression in
CC model human disease and to detect and quantify gene expression in
CC APRG, fragments of it and antibodies specific for APRG are useful as
CC aprofiles. The present sequence represents a human APRG polypeptide
CC profiles. The present sequence represents a human APRG polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1230 BP;

CC that binds a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC domain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED4 or CC NIDD (NGPR-interacting Death Domain), with a candidate binding agent and CC detecting the association of the domain and the candidate binding agent, combined two hybrid assay, immunoprecipitation, SPA, ultraviolet (UV) or CC chemical crossliking, nuclear magnetic resonance (NMR), mass cell spectroscopy (MS) and FPA. The invention is useful for modulating the CC level of a cell process such as cell proliferation, cell adhesion, cell immunoglobulin class switching, in particular apoptosis within a cell. CC immunoglobulin class switching, in particular apoptosis within a cell. CC muridarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the CTDD DD protein is useful for detecting a Chlamydia infection. The CC invention is useful for modulating the activity of oncogenic proteins, for treating bacterial infections by modulating the activity of bacterial CC proteins. The protein and antibody specific for it are useful for consecution, allergy, csepsie, autoimmunity, allograft rejection and other diseases. The protein consecution inflammation, inflammation, inflammation is used in antisense consecution is used in antisense consecution is used in antisense such as sepsie, fibrosis, fibrosis, fibrosis, graft versus host diseases such as sepsie, fibrosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

```
CC domain (DED) proteins and nucleic acids encoding them. The invention also comprovides death domain containing protein (CTDD) DD and neural growth factor content for the content of the protein such as Chlamydia trachomatis content for interacting death domain (NIDD) DD. The invention is useful for cidentifying a binding agent (e.g. protein or drug) that binds a DD, DED cor NB-ARC domain from DAP3, IRAK4, (CTDD) DED4 or NIDD with a candidate content modulates the association of a DD, DED4 or NIDD with a candidate content binds at DD, DED or NB-ARC domain with protein crowdiating the level of cell process such as apoptosis, cell adhesion, cell protein and B cell immunoglobulin class switching. DDs, DED5 and NB-ARC domain antibodies are useful for discovery of drugs that suppress infection, autoimmunity, inflammation, allograft rejection, sepsis and other diseases. DD, DED or NB-ARC domain proteins are used to treat infection, allograft suppression, cell proteins are used to treat infection, allergy, allograft rejection, sepsis, keratinocyte autoimmunity, inflammation, allograft rejection, sepsis, keratinocyte confilammatory hyperplasia, keloid, benign prostatic hypertrophy, fibrosis, inflammatory and gene therapy. The invention is also used in contibody therapy and gene therapy. The present sequence is human DED4 full length gene. The DED4 gene is located on chromosome 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

CC (c). Also described: (1) an expression vector comprising the above cnucleic acid; (2) a host cell comprising the above expression vector; (3) CC a process for producing a polypeptide; (4) an isolated polypeptide CC comprising: (a) an amino acid sequence encoded by any of the above collective sequences; (b) an amino acid sequence encoded by the full-cC length coding region of the above nucleotide sequences; or (c) a sequence comprising the above polypeptide fused to a heterologous polypeptide; (6) cc an isolated antibody that binds to the above polypeptide; (7) a process cc for producing the antibody; (8) an isolated oligopeptide that binds to the above polypeptide; (7) a composition of matter comprising the above (chimeric) polypeptide; (6) cc antibody, oligopeptide or TAT binding organic molecule that binds to the above polypeptide; (10) a cc composition of matter contained within the container; (12) methods of the composition of matter contained within the container; (12) methods of cinhibiting the growth of a cell that expresses the above protein, where ct the growth of the call is at least in part dependent upon a growth of the call is at least in part dependent upon a growth of the call is at least in part dependent upon a growth of the above protein; (13) a method of cell that expresses the above protein comprising cells that express the protein described above; (15) methods of diagnosing the presence of a protein in a sample suspected of containing the protein containing the protein associated with increased expression or activity of the above correction; (14) a method of determining the composition and (17) a method of binding an antibody, oligopeptide or correction; (15) methods of binding an antibody, oligopeptide or correction of a medicament for the therapeutic treatment or diagnostic detection of a cell that expresses the protein described above. The composition and methods are useful for diagnosing, cells therapeutic treatment or diagnostic detection of a cell proliferative disorder or cancer. 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

The nucleotide sequences AAA95790-A95798 encode the human apoptosis related proteins AAB1551-B1559. The genes can be used to generate fusion proteins by linking to the gene for the human immunoglobulin G Fc (IgG Fc) portion (AAA95799) for increasing the stability of the fusion protein as compared to the human protein only. The gene and encoded protein may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate apoptosis associated protein expression, e.g. cancer (e.g. colon, breast and prostate cancer, melanomas and lymphomas), inflammation, autoimmune disorders (e.g. multiple sclerosis) and viral infections (e.g. herpes))
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 2045 BP; 457 A; 620 C; 604 G; 364 T; 0 U; 0 Other;

                             concer-associated nucleic acid molecules (N) and proteins (P), where the corrections are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy cand vaccine production. N and P may be used in the prevention, diagnosis can determent of diseases associated with inappropriate P expression. For cexample, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome contact affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids cinto a host call and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent compass 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027 to 1052, 7921 and 7922
                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acids encoding 4277 human colon cancer-associated polypeptides, useful for preventing, diagnosing and/or treating colorectal cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; colon cancer; colon cancer antigen; diagnosis; detection; colorectal carcinoma; ss.

Lung cancer associated gene sequences, referred to as lung cancer antigens, useful for treatment, prevention, and diagnosis of disorders such as lung cancer.

Claim 1; Page 772-773; 1425pp; English.

Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer associated proteins represented in AAB58106 - AAB5848. Lung cancer associated proteins and polynucleotide sequences, their agonists, and antagonists may have neuroprotective; cycostatic; cardioactive; and cardioactive; muscular active general; vulnerary; gastrointestinal general; nephrotropic; antiinfective; gynecological; or antibacterial cartivity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung cancer associated polynucleotide sequences may be used for detection of lung cancer, chromosome cidentification, as chromosome markers, and for numerous other disgnostic or research purposes. The proteins may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders. The proteins may also be used in the treatment of wounds and infectious diseases.

CC be used in the treatment of wounds and infectious diseases.

CC used in the course of the invention for the identification and cc characterisation of the polynucleotide and protein sequences.

Sequence 2044 BP; 457 A; 620 C; 603 G; 364 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to the isolation of novel cDNA sequences CC which encode human secreted proteins. The cDNA sequences have been CC derived from a variety of human tissues. The invention also provides a CC method for producing proteins from these polymucleotide sequences. The proteins are useful for identifying compounds that modulate expression of the polymucleotide sequences compounds that modulate expression of the polymucleotide sequences compounds that modulate expression of the polymucleotide sequences compounds that modulate expression of the invention are useful for treating diseases such as hyperproliferative disorders (e.g. cancer), immune deficiency disorders (e.g. severe combined immunodeficiency (SCID)), autoimmune disorders (e.g. severe combined immunodeficiency (SCID)), autoimmune disorders (e.g. multiple sclerosis), blood disorders (e.g. thrombocytopaenia), inflammatory disorders (e.g. arthritis) and confectious disorders (e.g. hepatitis). The polymucleotide sequences of the invention are also useful in gene therapy. AAS62214-AAS62838

antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant; contral nervous system; virucide; anti-HIV; fundicide; antimutagen; cardiovascular; antianaemic; antiangregant; haemostatic; vulnerary; cardiovascular; antianaemic; antiangregant; haemostatic; vulnerary; cantiulcer; osteopathic; dermatological; antiallergic; antiasthmatic; antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; antiparkinsonian; and immunostimulant. The proteins and polynuclectides encoding them can be used in gene therapy, antisense therapy and vaccine production. The proteins and polynucleotides are useful for screening for cagonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, rehumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, concuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, haematopoietic disorders, caneemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, costenoporosis, severe combined immunodeficiency, eczema, allergic chinitis, asthma, diabetes, cancer, multiple sclerosis, depression, and control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes primer sets for synthesising 5602 full-
CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC complementary strand of a polynucleotides; or (b) a combination
CC of an oligonucleotide comprises at 15 nucleotides; or (b) a combination
CC complementary strand of a polynucleotide which comprises a 5'-end
CC complementary strand of a polynucleotide which comprises a 5'-end
CC complementary strand of a polynucleotide which comprises a 5'-end
CC complementary strand of a polynucleotide which comprises a 1'-end sequence of the combination of
CC complementary strand sequence is sequence of the combination of
CC cligonucleotide which comprises at least 15 nucleotides and the combination of
CC cligonucleotide comprises at least 15 nucleotides and the combination of
CC cligonucleotide strand of sequence is selected from those defined in the
CC cligonucleotide. The primers are useful for synthesising polynucleotides,
CC sparticularly full-length cDNAs. The primers are also useful for the
CC cluster of the substanting of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and

The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactio/chemokinetic activity, haemostatic and thrombolytic activity, cancer disposis and therapy, drug screening, assays for receptor activity, cancer disposis and inflammation, leukaemias and c.N.S disorders. Note: The sequence data for this patent did not form
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    21-JAN-2000;

The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokingtic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. The GPCR-like polypeptides and polynucleotides are useful for the treatment of diseases of ophthalmic, neurological, immunological mephritic systems. They may also be used to treat hormonal dysfunction, cancer, atherosclerosis and diabetes. The antibodies are useful for detecting or quantitating the polypeptide in tissue. The polypeptides can also be used as molecular weight markers and as a food supplement. This sequence represents a human polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New G-protein-coupled receptor-like polypeptides and polynucleotides, useful for treating diseases of ophthalmic, neurological, immunological and nephritic systems and hormonal dysfunction, cancer, atherosclerosis and diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             21-JAN-2000;

                                                                                                                                                                                                                                                                            The invention relates to a polynucleotide comprising a sequence given in the specification, or its mature protein-coding portion, or its complement. The polynucleotide is useful for treating diseases e.g., cancer or neurodegenerative diseases and many others listed in the specification. The present sequence represents a novel human cDNA. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at sequence.html?DocID=20030104529.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                    which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cyrostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human soft tissue sarcoma-upregulated DNA - SEQ ID 1627.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel method for detecting soft tissue
                                                                                                                                                        Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  571

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC chemical crossliking, nuclear magnetic resonance (NMR), mass grectroscopy (MS) and FPA. The invention is useful for modulating the CC level of a cell process such as cell proliferation, cell adhesion, cell stress responses, responses to microbial infection and B cell CC immunoglobulin class switching, in particular apoptosis within a cell. CC Antibody specifically reactive with CTDD DD of C. trachomatis, C. muridarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the CTDD DD protein is useful for detecting a Chlamydia infection. The CC invention is useful for modulating the activity of oncogenic proteins, CC for treating a pathology caused by the oncogenic proteins and for creating bacterial infections by modulating the activity of bacterial for CC proteins. The protein and antibody specific for it are useful for CC discovery of drugs that suppress infection, inflammation, allergy, cc sepsis, autoimmunity, allograft rejection and other diseases. The protein is useful for treating immune-based pathologies, pathologies associated CC with cell division, inflammatory diseases such as sepsis, fibrosis, call division, inflammatory diseases such as sepsis, fibrosis, arthritis, graft versus host disease. The invention is used in antisense therapy and gene therapy. The present sequence is human DEDA DED CDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
